Lorton, VA – January 27, 2012 – Alternative energy producers of bio-diesel fuels have built large facilities around the country over the last 10 years. Green Earth Technologies built their production plant in the mid-Atlantic region to have access to the supply of raw materials for its refining operation, which produces thousands of gallons of finished high-quality fuels each month.

Facility Manager Mindy Murtaugh said, “We had a bio-diesel spill in the back warehouse and we used GreenSorb® for the first time on a large area. The first thing that I noticed was that the smell went right away. In a confined space, such as a warehouse, where a smell like that can be overwhelming, it was great not to breath the intense fumes that a spill like that can create.”

“We left the spill area for about twenty minutes while we looked at the source of the leak. When we returned to take a look, the GreenSorb had pulled the entire spill into where it had been sprinkled- somewhat like metal shavings to a magnet. It dried the area so well, it was the first time we didn’t have to use a degreaser or mop up after sweeping... what a time saver. Amazing stuff!”

GreenSorb products are eco-friendly, multi-purpose absorbents designed for numerous industry applications. GreenSorb is made in the USA by Sorbent Green LLC. The company sells through large distribution channels in the following market segments: Aviation/Aerospace, Commercial, Environmental Services, Government, Health/Medical, Industrial, Janitorial/Sanitation, Oil & Gas, and Safety.
