Aiken, SC - December 15, 2011 – One of the well-known manufacturers in the world is Cessna Aircraft Company, which has produced over 190,000 airplanes in 80 plus years of operation. Cessna-Citation service centers are operated around the world, and their location in Greensboro, NC recently convinced themselves of GreenSorb's capabilities after conducting their own independent testing.

"We met the guys from the Cessna-Citation Service Center of Greensboro during the 2011 PGA Master's golf tournament in Augusta," said Charlie Muldoon, VP Business Development for GreenSorb. "We gave them samples to try and followed-up for a few months with not much response. Then, in early December, we got a call from Wade Gibson, the Service Line Lead."

Wade said, "we had a large spill of Jet-A where we had to act fast. We used crushed clay and peat moss, but it wasn't working. Then, we remembered we had the sample of GreenSorb. That stuff...it's the 'bomb.' It's the only thing that worked, so we had to get our order in for more!"

GreenSorb products are eco-friendly, multi-purpose absorbents designed for numerous industry applications. GreenSorb is made in the USA by Sorbent Green LLC. The company sells through large distribution channels in the following market segments: Aviation/Aerospace, Commercial, Environmental Services, Government, Health/Medical, Industrial, Janitorial/Sanitation, Oil & Gas, and Safety.
