Lorton, VA – February 9, 2012 – The demand for power in the mid-Atlantic region has grown substantially over the last 30 years growth, and the installation of back-up power generation has followed along. Webb-GenTech Services is one of the larger dealers of commercial & industrial generators in the region.

“Power outages do occur,” said William Webb, President. “We service and maintain all of our customers’ equipment, so when emergency power is needed...their facility is up and running.”

“We found GreenSorb about a year ago. The product is truly amazing! We use large amounts of coolant, diesel fuel and motor oil in our service program. We keep containers of GreenSorb on all of our service trucks as an “insurance policy” for us, as well as the customer. When the need arises for us to clean up a spill it’s nice to know that we have all we need to clean up the spill quickly and responsibly. Not to mention the customers’ peace of mind knowing we are taking care of their property and the environment. We recommend GreenSorb to all of our customers to have on hand in case of an accidental spill.”

GreenSorb products are eco-friendly, multi-purpose absorbents designed for numerous industry applications. GreenSorb is made in the USA by Sorbent Green LLC. The company sells through large distribution channels in the following market segments: Aviation/Aerospace, Commercial, Environmental Services, Government, Health/Medical, Industrial, Janitorial/Sanitation, Oil & Gas, and Safety.
