**Aiken, SC – June 2nd, 2014** – Sorbent Green is pleased to announce the expansion of their ongoing strategic partnership with RSC Bio Solutions (formerly known as Terresolve Technologies, Ltd) with an arrangement to distribute the full complement of RSC's bio-based solvents, hydraulic and lubricant fluids. As an approved distributor, Sorbent Green is able to offer their customers with Environmentally Acceptable Lubricants that meet the requirements of the 2013 U.S. EPA Vessel General Permit (VGP).

“Our continued growth with the Greensorb absorbent into large industrial-commercial facilities cast a spotlight on customer’s needs for bio-based solutions as well,” said Tom Uskup, Sorbent Green’s CEO. “The combined offering of Greensorb together with bio-based solvents and functional fluids is another bold initiative that we see progressive customers embracing as we expand our relationships with them.”

Bio-based hydraulic and lubricant fluids not only meet or exceed the performance of conventional, petroleum-based fluids, but also help mitigate operating costs and improve environmental impacts. Bio-based solvents/cleaners and functional fluids can prove to be a more cost-effective choice by industrial-commercial facilities management in terms of lowering the threat of potential risks to employees and the environment, such as expensive spill response, remediation and fines a company incurs if hazardous fluids are spilled or leaked onto soil, pavement or water during use.

Sorbent Green is focused on developing, manufacturing & distributing bio-based products that work exceedingly better for industrial-commercial applications, while imposing significant environmental benefits. Their products are used in Aerospace, Chemical, Commercial, Health, Industrial, Oil & Gas, and Government market sectors. More details can be found at
