AIKEN, SC, AUGUST 5, 2011 - The facilities management team for the government offices of the United States Treasury in Washington, D.C. recently selected GreenSorb to become their primary spill absorbent used throughout their facilities.

“We held several meetings with both the managers as well as the employees of the facilities management team and they plan to use GreenSorb for all of their spills,” said Charlie Muldoon, VP Business Development for GreenSorb. “As a typical large facility, the expected uses are for machinery oil leaks, solvents, cafeteria/break room food spills, Jan-San cleaning, spills around the offices, and with the government vehicles.”

Mr. Muldoon adds, “When we demonstrated the product, the entire team was very impressed by the performance of GreenSorb. The guys were coming up with all kinds of ideas & applications, but the major criteria used in the final selection process were safety, value and GREEN/ environmental downstream waste considerations.”

GreenSorb products are eco-friendly, multi-purpose absorbents designed for numerous industry applications. GreenSorb is made in the USA by Sorbent Green LLC. The company sells through large distribution channels in the following market segments: Aviation/Aerospace, Commercial, Environmental Services, Government, Health/Medical, Industrial, Janitorial/Sanitation, Oil & Gas, and Safety.
