AIKEN, SC - AUGUST 17, 2011 – Environmental officers, safety managers, and fire/emergency responders at large airports in the northeast make the change to use new eco-friendly absorbent for aviation fluid spills. Jet fuel spills are frequent and among the top concerns at major airports around the world.

“Over the past 6 months, we engaged the aviation industry to take notice of independent lab reports showing how GreenSorb® absorbent works to increase safety and ease environmental concerns with aviation fluid spills, and some large airport facilities are beginning to jump on board,” said Tom Uskup, President.

Charlie Muldoon, VP of Business Development, explains “the environmental team at Reagan National Airport (DCA) in Washington DC started using GreenSorb because it would absorb and encapsulate all aviation fluids. They also appreciated that GreenSorb passes EPA testing after absorption, which translated into improved safety and lower cost-per-use for the Washington Metro Airport Authority.”

Islip Regional Airport (ISP) on Long Island, NY embraced GreenSorb as Hazmat Team Member Mike Allen put it, “the reason we use GreenSorb is that it works. Every other product we have tried does not compare to GreenSorb on absorbing caustic liquids like SKYDROL®. The other products we’ve used contain the aviation liquids at best, but GreenSorb absorbs them. Even in wet conditions, when the others don’t seem to work at all, GreenSorb still works the way we want. GreenSorb is our team’s product of choice.”

Mr. Uskup added, “the aviation & aerospace industry is extremely focused on safety and performance, so the fact that these large airports find value in using our product suggests that more airport facilities will take notice. Next, we expect to get the attention of major airport users like large airline operators, manufacturers, and aviation MROs.”

GreenSorb products are eco-friendly, multi-purpose absorbents designed for numerous industry applications. GreenSorb is made in the USA by Sorbent Green LLC. The company sells through large distribution channels in the following market segments: Aviation/Aerospace, Commercial, Environmental Services, Government, Health/Medical, Industrial, Janitorial/Sanitation, Oil & Gas, and Safety.
